How to run this plan

- **Build your day from 1 breakfast + 1 lunch + 1 dinner + 1 snack.** Any combo lands you right around 2,100. No math needed.
- **Protein is the anchor: aim for 160g every day.** Hit that and everything else falls into place.
- **Rotate the 3 options so you never get bored.** Same slot, different meal, still on plan.
- **Prep the cook-once meals on Sunday.** Chicken, beef, and rice batched means the week runs itself.
- **Log it in the app.** Save your go-to meals to Favorites so re-logging takes 10 seconds.
- **Busy day? Lean on the no-cook options.** A shake or jerky combo still counts. Never skip.

These are starting numbers. Once you log a few weeks of body stats, we tune them to exactly how your body responds.

The rules that make this work

- **Protein first, every meal.** Build the plate around it and the rest is easy.
- **Never drop below 1,900 calories. Under-eating is what triggers the late-night raid on the pantry.**
- **Prep on Sunday.** Cook the proteins and rice once, portion it, and the week runs itself.
- **Log body stats every Friday.** That is how we tune these numbers to your body over the next few weeks.

- **Rotate the options.** Three choices per slot means it never gets boring, so you never quit.
